Decorative structures for a new way of enjoying the outdoors

Imagine an outdoor space that can adapt to every moment of the day: more shade, greater comfort, more style and better integration with the surroundings. This is how Seesky Deco came about – the new range of decorative pergolas from C3 Systems, designed to transform terraces, gardens, hotels, restaurants and landscaping projects into outdoor spaces that are more liveable, functional and aesthetically pleasing.

With a contemporary architectural vision, Seesky Deco brings together three distinct solutions —**Slat, Interwoven Fabric and Palillería Awning**— designed to provide sun protection, environmental comfort and visual character to every project. More than just an external structure, Seesky Deco is a way of designing shade, defining spaces and expanding the possibilities for using outdoor areas.

Lightweight and resistant structures

Aluminum Profiles

The aluminum profiles of our structures stand out for their elegant and minimalist design, **where the beam screws remain hidden**, ensuring a clean and sophisticated finish.

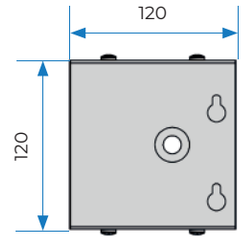

120x60mm beam profile

Wall support

The configuration with wall support allows **great flexibility of adaptation** according to the available space while maintaining the clean aesthetics of the set.

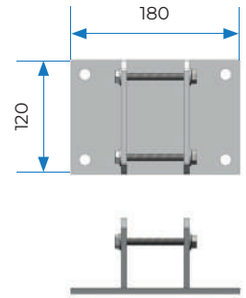

120x120mm wall support

Floor support

The floor anchoring provides a **solid and resistant base to the set**, ensuring stability. This solution allows for the installation of independent structures, depending on the project design.

180x120mm screwed floor fixing

Solutions adapted to your space

Seesky DECO structures allow multiple configurations according to the environment and client requirements: Wall-mounted installations, island-type structures, or successions (3, 4, 5,...), either in width or length, each option has been designed to combine strength, aesthetics, and functionality. Here are some illustrative examples:

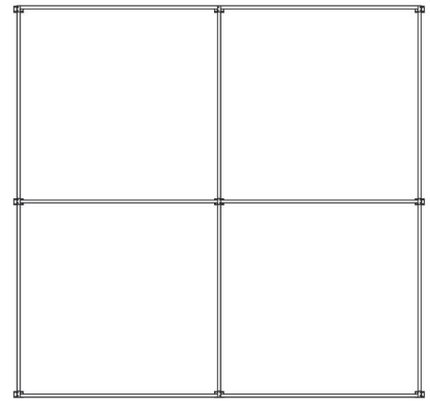

Successions

Modular arrangement that shares the central pillar between structures.

L-Shaped Successions

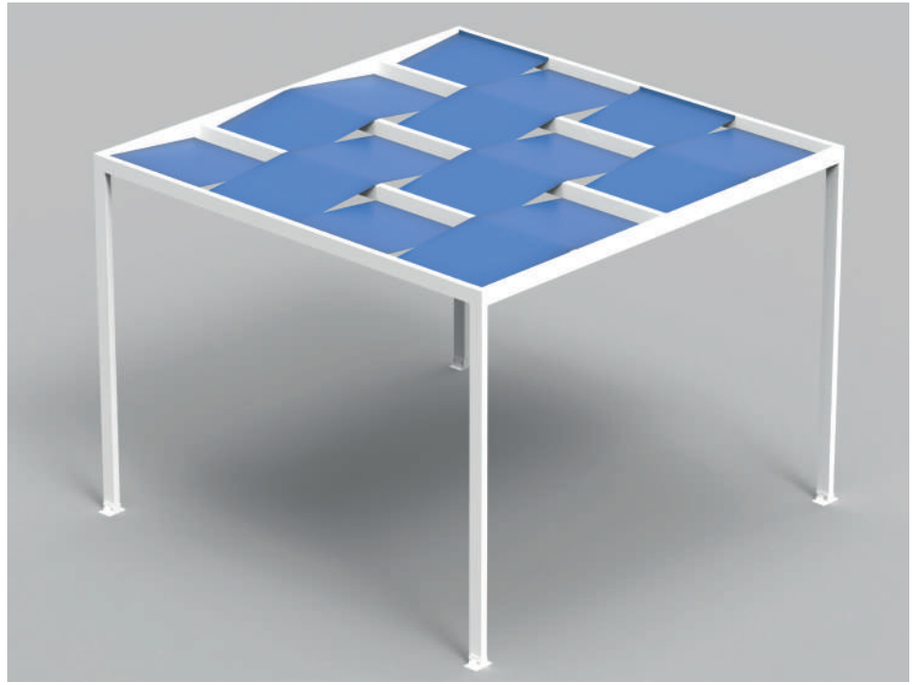

Modular arrangement that optimizes space by maximizing the shading capacity.

Square Successions

Modular arrangement designed to cover large spaces by optimizing the use of aluminum.

Perfect balance between comfort and style

Seesky Deco Slat allows you to create more comfortable outdoor spaces through a decorative sun protection solution based on fixed aluminium slats with a wood-effect finish. Its design brings visual rhythm, warmth and character to the space, creating shaded areas that enhance the sense of comfort without losing the connection with the surroundings.

Thanks to its different orientations — 45°/135° or vertical — and the option to choose the spacing between the slats, each project can tailor the level of light, privacy and aesthetic appeal to suit its specific needs. A solution particularly well-suited to homes, terraces, relaxation areas, contract spaces and projects where shade is also an integral part of the architectural design.

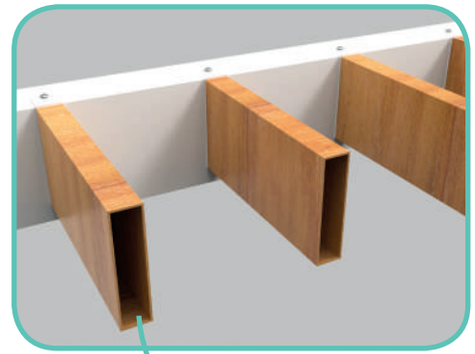

Seesky deco Slat: Private home environment.

Slats orientation

45° slats

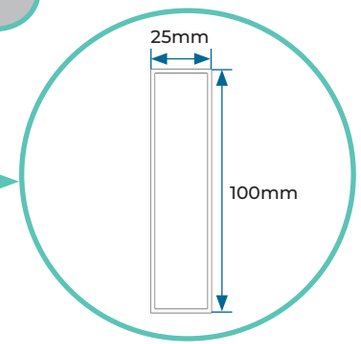

With a 45° inclination, they provide a continuous shading effect and more direct sun protection. Additionally, they can be combined with the vertical slat option if the module is divided into different quadrants.

Vertical slats

With a 90° inclination, they provide maximum light entry. Linear elegance that favors natural ventilation.

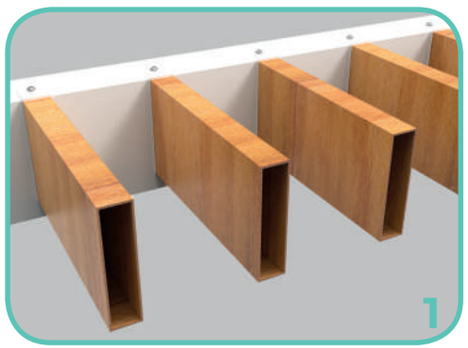

Slat section

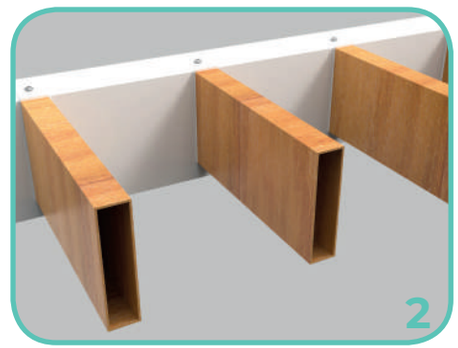

Distance between slats

There are three options depending on the preferred distance between slats:

1 | Dense:
Distance between slats of 120mm

2 | *Standard:
Distance between slats of 170mm

3 | Spaced:
Distance between slats of 220mm

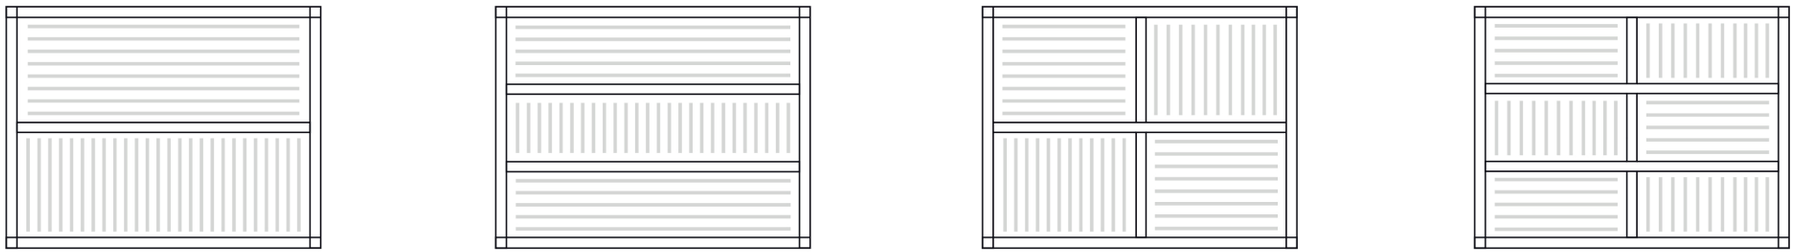

**The gap between the slats is not fixed and may vary depending on the overall dimensions.*

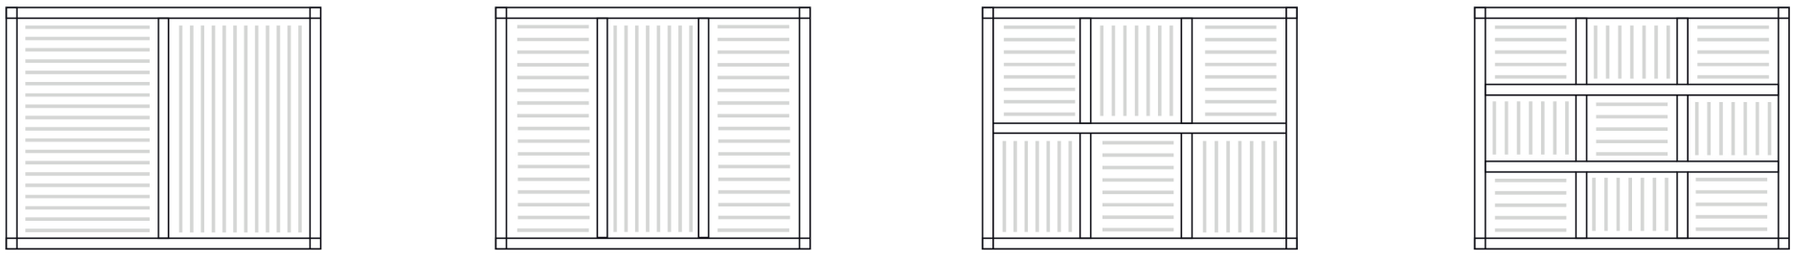

Structure quadrants

The Seesky DECO structure allows subdividing the interior into quadrants or sections, achieving greater customization of the space. These divisions adapt to aesthetic or functional criteria such as light passage, accessory installation, or integration with furniture.

Each quadrant operates independently, providing greater versatility when managing natural light in different areas of the same structure. Thus, it is possible to create areas with different levels of shade or openness, depending on the use or time of day.

Quadrants (Divisions in width and length Max. 3 divisions per side).

These are some examples of quadrants. For other configurations, please consult.

Structure in succession with unevenness.

seesky deco® | Interwoven fabric

Decorative sun-resistant fabrics

Decorative pergola with fabric screens and imitation wood beams to protect from the sun. Intelligent protection from the sun in any environment.

Interwoven fabric

Seesky Deco interwoven fabric transforms terraces, gardens and commercial spaces into more comfortable, decorative and liveable outdoor environments. Its aluminium frame with a wood-effect finish is combined with panels of Sauleda technical fabric, interwoven between the beams to filter sunlight and create a light, attractive and functional shade.

Available in a range of finishes and configurations, it is suitable for private homes as well as hotels, restaurants and outdoor leisure spaces, bringing design, sun protection and character to every project.

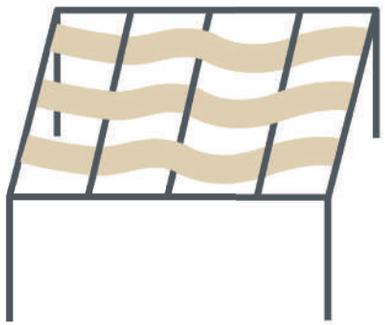

Seesky deco interwoven fabric: Cafe environment

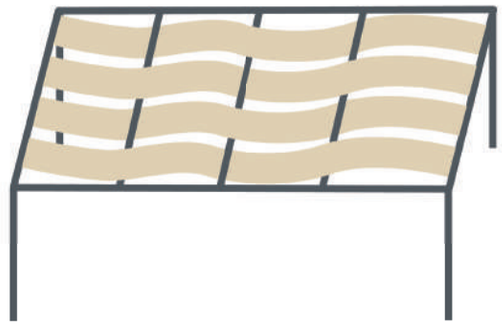

Customised configurations for each project

Every Seesky DECO interwoven fabric structure is tailored to the space and the client: from a single module to multiple arrangements, combining visual elegance and technical strength through its fabrics and modules, whilst offering complete freedom of design.

seesky deco® | Palillería awning

Effective sun protection

In outdoor spaces, comfort depends on the ability to adapt to the weather and the specific use of the space at any given time. Seesky Deco Palillería awning offers a practical and elegant sun protection solution, combining an aluminium frame with a retractable awning system that allows you to adjust the shade according to the space's requirements.

Advantages of fabrics

- **Weather resistance**

  The technical fabric that withstands temperature changes and remains in good condition in humid environments. UV protection prevents discolouration from the sun.

- **High durability**

  Made from technical fabrics such as solution dyed acrylics or PVC coated polyester, they stand the test of time and continuous use.

- **Easy maintenance**

  Allows for easy cleaning, ideally with just water and neutral soap, and features dust and dirt repellent finishes to reduce the frequency of maintenance.

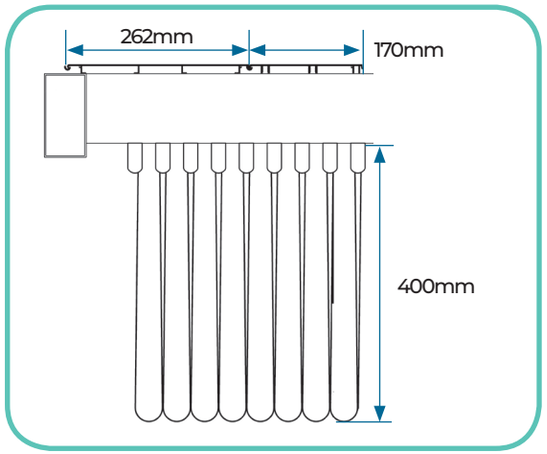

- **Dimensional stability**

  The fabric retains its shape without warping or buckling, even with age or weather changes, for a neat and professional appearance.

pdv®

Vertical decorative profile

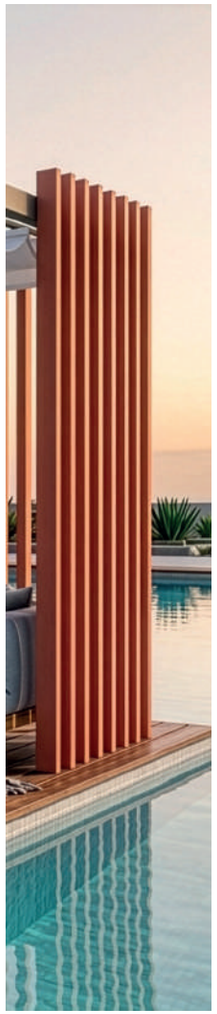

This decorative vertical pillar, made from aluminium, allows you to personalise and enhance outdoor spaces with an attractive, durable and easily integrated solution. Its design, featuring vertical lines, creates interplay between light and shadow, provides privacy and helps to define areas without visually closing off the space. A versatile and durable option to complement existing structures and transform any outdoor space into a more sophisticated, tidy and liveable environment.

WARRANTIES AND APPROVALS

Seesky deco comes with a 3-year warranty and complies with the quality and safety requirements established by ISO 1090 and CE marking. These certifications reflect C3 Systems, S.L.'s commitment to excellence, strict control in every phase of the manufacturing process, and compliance with European standards.

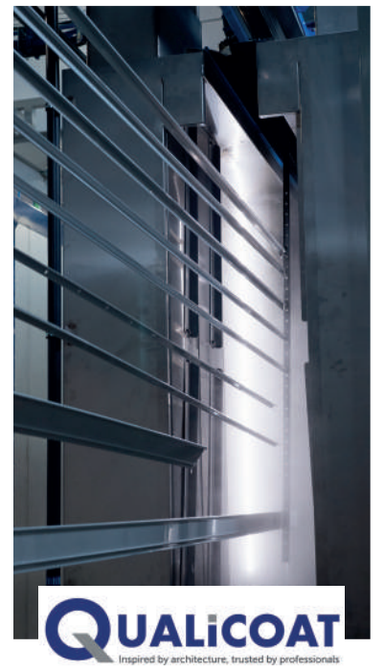

3 year warranty*
Seesky DECO has a 3-year warranty on all components
*(See document in the client area - B2B).

Guarantee of manufacturing quality and safety of products from manufacturers in the metal sector, including those of metal structures.

CE Marking
All our systems are approved by an official laboratory and in accordance with the requirements of the European Commission to bear the CE Marking seal. We have all the tests and certifi cates that comply with this regulation and we have a computer tool that makes it easier for the workshop to obtain this label.

Sauleda fabric certificates

T1 Certificate
Made in Europe
UV Standard 801
European Commission Certificate
Pureti Certificate
Masacril
OEKO Certificate
Fabric protector
ISO 9001 - LRQA

Our new facility incorporates an advanced multi-metal powder coating plant, designed to apply high quality finishes to aluminium profiles and other metal accessories. This system complies with the most demanding international standards, including Qualicoat, Qualicoat Seaside and Qualimarine.

Thanks to a flexible process architecture, this plant allows the surface treatment of different metals through customisable configurations with specific recipes. This versatility not only guarantees an excellent finish, but also expands our production capabilities and opens up new business opportunities.

aluminio
infinitamentereciclable.com

Why should we use aluminum for the systems of the future?

FOR ITS ENVIRONMENTAL ADVANTAGE

It is the only material that is 100% recyclable and reusable infi nitely many times.
It is the only 100% sustainable and is effectively recycled. The high price of its scrap proves it.
The mineral with which it is produced is practically inexhaustible.
It is the only one that promotes 100% circular economy.
